## General

RLB1-24DP is a 24Vdc "buffered" relay with a double pole double throw output (DPDT). Solid state "buffering" of trigger inputs allows RLB1-24DP to be connected to equipment with limited current sink ability, enabling control of devices drawing up to 1A per pole.

A constant 24Vdc supply must be connected to the terminals marked F & G in Table 1.

The relay may be triggered with a negative or positive voltage applied to terminals A or B (respectively).

By default, both poles of the relay are voltage free "dry" contacts. A positive or negative voltage can be applied to the common of either or both poles by changing the jumper settings (K & L) - Negative to the left or Positive to the right.

RLB1-24DP is also available as a strip of 8 for multiple output applications (such as lift control) - 24Vdc need only be connected to the first relay in the strip as they are connected on a common bus - order Tactical Part No: RLB8-24DPDT.

Please visit [www.tacpower.com.au](http://www.tacpower.com.au) for additional models.

Input Voltage	24Vdc ( 20 - 28Vdc )
Current Draw	22mA approx
Configuration	DPDT
Contact Rating	1A @ 30Vdc
Dimensions	30W x 40L x 20H mm

Table 1.	
A	Negative Trigger Input ( 0V )
B	Positive Trigger Input ( 5 - 24Vdc )
C	Pole 2 - Common
D	Pole 2 - Normally Closed
E	Pole 2 - Normally Open
F	24V Input ( - Negative )
G	24V Input ( + Positive )
H	Pole 1 - Common
I	Pole 1 - Normally Closed
J	Pole 2 - Normally Open
K	Pole 1 Common Link ( - C + )
L	Pole 2 Common Link ( - C + )
